

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Objective

To automate the process of ordering standard laptops using ServiceNow Flow Designer, reducing manual work and improving the IT procurement process.

Phase 1 – Project Setup

- ServiceNow instance setup
- Required application/modules identified
- Project requirements configured

Phase 2 – Request Configuration

- Laptop request process created
- Required fields configured
- Standard laptop order details added

Phase 3 – Flow Designer

- Flow created in Flow Designer
- Trigger configured for laptop requests
- Required actions and conditions added
- Approval/procurement steps automated

Phase 4 – Testing

- Sample laptop request submitted
- Flow execution verified
- Approval and automation steps tested
- Errors corrected where required

Phase 5 – Documentation & GitHub

- Phase-wise project files collected
- Screenshots/documentation organized
- Files uploaded to the GitHub repository
- Final project structure verified

Conclusion

The project automates standard laptop procurement using ServiceNow Flow Designer and provides a structured workflow from request submission through the required procurement steps.
